WRITING ABOUT A PIE CHART

The two graphs show the changes in attractions of different online activities for smartphone and tablets users. By look the charts, it is clear that users spent most of their time on games and social networking in terms of both electronic products because this accounts for almost three-fourth of the total time spent.

Games is a dominant activity in time that user spend more than half of their time on tablets (57%) and 37% on smartphone. The second largest proportion in both devices ascribes to social networking time. Users spent nearly twice as much time on social networking on smartphones (29%) as they do that on tablets (15%). Similarly, users spent more time on utilities on smartphones than on tablets.

However, for enjoying music and videos, tablets users spent more time with a percentage difference of 5 than smarthphones users. Tablet users spent 13% of their time on music and videos, while smartphone users spent 8% of their time on that. The percentage of time spent on other activities is 5% for smartphone users and 8% for tablet users, respectively. While compared the two charts, many activity show the different. But in both gadgets, time spent for news almost same and recorded as the smallest proportion. The time consumed on news accounts for 3% of all on smartphones and 4% on tablets.

In conclusion, since the two gadgets are the most popular device, it is clear that the least popular activity in both gadgets is time for news. Many people using smarthphone for concise purposes like scrolling social media, utilies to call, take a picture, etc. and can be used anytime, also it is relatively small than a tablet. The tablets usually use for enjoying the time or refreshing like watch a movie, play games, listen music, etc. Now, era of technology, the two both gadgets are important to use and have many benefits that can be usefull in the future.
